

ABSTRACT

The invention is a method and system for visualizing a level of trust of network communication operations and connection of servers. In a system comprising a terminal, including a display and a network, the terminal using a browser to communicate with a network during a terminal session comprising at least communication operation initiated by a user and transmitted to the network, a method of the invention includes initiating a terminal session with the browser by making a transmission to the network; the network, in response to initiation of the terminal session, provides information from the network to the browser relating to the terminal session; and displaying on the display a level of trust based upon a standard of comparison of the at least one communication operation prior to transmission to the network informing the user of a level of security determined to be associated with the at least one communication operation if the at least one communication operation is permitted by the user to be transmitted to the network.
